

## Our Products

Our portfolio of ingredients is specially selected to meet the needs of our dynamic market. Being a global company, we constantly monitor the world for new and unique ingredients to bring to the industry.

Meeting your requirements for a safe, efficacious product begins prior to the manufacturing process. As we select our raw materials, special care is taken to protect their integrity. Our in-house laboratories can supply validated analytical methods by utilizing ICP, HPLC, HPTLC, GC, UV, FT-IR and MICRO.

## Multimineral Triturations

GenTriT<sup>®</sup> and MultiTriT<sup>®</sup> granulations are custom designed and built using between two and fifteen minerals. These customer focused blends allow you to choose the combinations you require depending on your application such as tablets, capsules and powder drinks. Because our granulations are ready to use, there is no need to include additional weigh-outs or create your own wet granulation steps.
